QUADRILL
DEMOLITION

PRECISION AT EVERY DEPTH.

SAWING | CORE DRILLING | CONCRETE BREAKING | UNDERWATER CUTTING

OUR SPECIALIST SERVICES

WALL SAWING

Clean Cuts.
Exceptional Accuracy.

Precision diamond sawing for reinforced concrete walls, floors, and structural openings. Delivers clean, straight cuts with controlled vibration for doors, windows, shafts, and service penetrations.

WIRE SAWING

Advanced Cutting for Heavy Structures.

High-capacity diamond wire sawing for thick concrete, heavily reinforced structures, bridges, beams, and foundations. Enables precise cutting of large sections in demanding site conditions.

FLOOR SAWING

Precision Cutting at Ground Level.

Efficient diamond cutting of concrete slabs, pavements, and industrial floors. Ideal for expansion joints, trenching, utility installations, and controlled slab removal.

CONCRETE BREAKING & REMOVAL

Efficient Breaking. Controlled Removal.

Professional concrete breaking using hydraulic breakers, robotic equipment, and specialized tools. Ideal for renovation, repairs, selective demolition, and structural modification projects.

CORE DRILLING

Accurate Openings. Minimal Disruption.

Precision circular drilling in reinforced concrete for MEP installations, anchor systems, utility connections, and structural applications, delivering clean openings with minimal surrounding damage.

UNDERWATER CUTTING

Specialist Solutions Below the Surface.

Specialized underwater cutting for marine structures, bridge foundations, jetties, and offshore infrastructure. Designed to support precise structural modifications and demanding underwater demolition works.

INDUSTRIAL DEMOLITION

Reliable Demolition for Industrial Facilities.

Comprehensive demolition for factories, warehouses, plants, and industrial units. Services include machinery removal, foundation breaking, and structural dismantling with a focus on site safety and operational requirements.

STRUCTURAL DISMANTLING

Engineered Removal. Controlled Execution.

Planned dismantling of steel, concrete, and composite structures through systematic sequencing. Suitable for buildings, frameworks, slabs, columns, and complex structural components.

MARINE & QUAY WALL CUTTING

Precision Engineering for Marine Infrastructure.

Specialized cutting for quay walls, port structures, jetties, and waterfront infrastructure. Supports controlled concrete removal and structural modifications in challenging marine environments.

CONTROLLED DEMOLITION

Precision Demolition. Maximum Control.

Safe, systematic demolition using engineered methods and specialized equipment. Ideal for complex structures, industrial facilities, and projects requiring minimal vibration and disruption.

WATER JETTING & HYDRODEMOLITION

Powerful Water.
Precise Concrete Removal.

High-pressure water jetting for controlled removal of deteriorated concrete. Helps preserve sound concrete and reinforcement while supporting repairs to bridges, tunnels, marine structures, and critical infrastructure.

SURFACE PREPARATION & GRINDING

Smooth Finishes. Superior Surface Preparation.

Professional concrete grinding and surface preparation for floors and slabs. Creates clean, even surfaces ready for coatings, flooring systems, refurbishment, and new installations.

PILE TRIMMING & BREAKING

**Accurate Pile Preparation.
Strong Foundations.**

Controlled trimming and breaking of concrete piles to the required cut-off level. Prepares pile heads for foundation works while helping preserve reinforcement and maintain construction quality

ENGINEERED FOR EXCELLENCE. BUILT ON TRUST.

From specialized concrete cutting to complex demolition, we deliver reliable solutions built on precision, safety, and performance. Committed to quality workmanship and efficient execution, we help bring every project to completion with confidence.
